

VariAx[®] 2

Small Fragment

System components

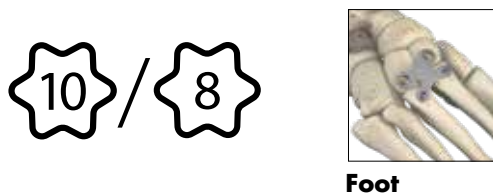

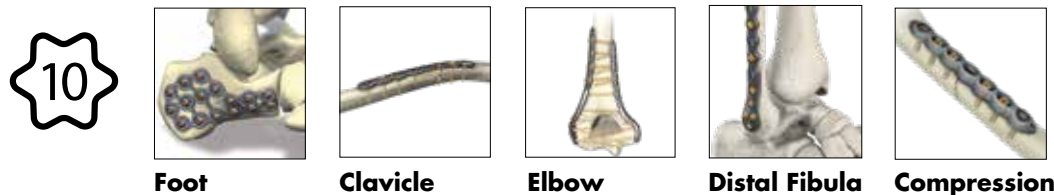

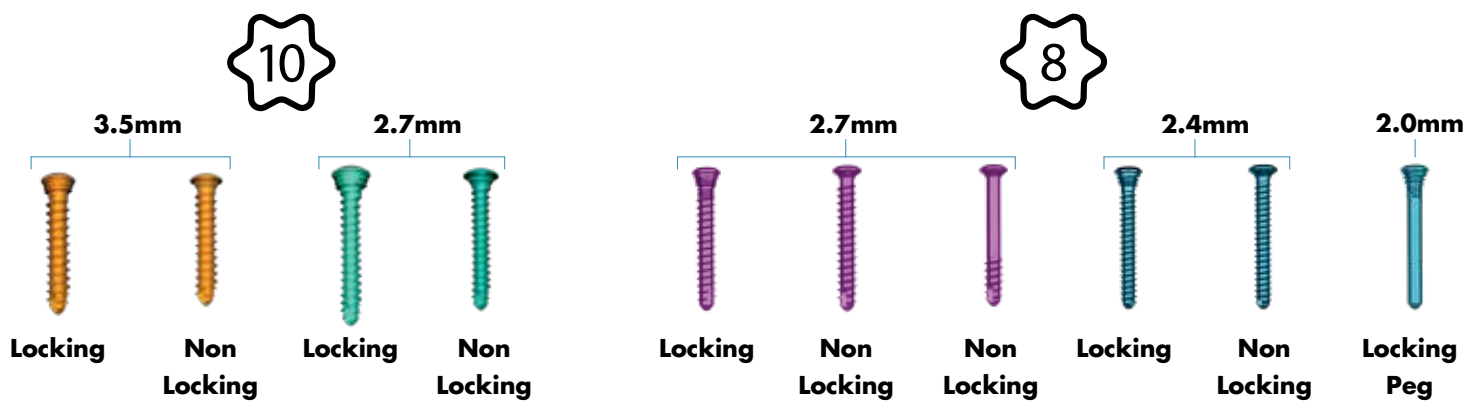

Introduction – The VariAx 2 Small Fragment System

The VariAx 2 Small Fragment System is a platform of implants, instruments, and trays designed to house, sterilize, and deliver the full range of VariAx 2 indications. These include the Clavicle, Elbow, Distal Radius, Distal Fibula; Foot and Compression Plating. The T10 and T8 Screw Platform is color coded by diameter, and the VariAx 2 Instrument Platform follows the same color logic for clear intra-operative identification.

The system is driven by the T10/T8 Core Tray which contains standard instruments and screws to perform any VariAx 2 Small Fragment Plating. Each Add-On Tray provides the plates and any specific instruments dedicated to the indication such as aiming blocks or specialty reduction instrumentation.

The T10 Screws and Instruments are used with Clavicle, Elbow, Compression, Distal Fibula, and T10 Foot plates, while the T8 Screws and Instruments are used with the Distal Radius and T8 Foot plates. Also, there are a number of Foot plates which use both T10 and T8 screws in tandem.
